Complete Guide to Every Module

Version 1.0 • August 2026

Table of Contents

1. Login & Dashboard
2. Company Settings & Roles
3. Master Data (Items, Categories, Units)
4. Partners (Customers & Suppliers)
5. Currencies & Exchange Rates
6. Sales
7. Purchases
8. Inventory & Warehouses
9. Stock Takes
10. Accounting
11. Payments
12. Human Resources
13. Projects
14. Manufacturing
15. Point of Sale (POS)
16. Reports
17. Tips & Best Practices

1. Login & Dashboard

Logging In

Open your web browser (Chrome, Firefox, Edge, or Safari) and navigate to the ERP URL provided by your administrator (e.g., <https://erp.yourdomain.com> or <http://localhost:9009>).

1. Enter your email address in the Email field
2. Enter your password in the Password field
3. Click 'Sign In'
4. If you belong to multiple companies, select the company you want to work in
5. You are redirected to the Dashboard

Dashboard Overview

The Dashboard is your home screen. It shows four key performance indicators (KPIs) at the top:

- **Total Revenue:** Sum of all confirmed sales invoices
- **Net Profit:** Revenue minus cost of goods sold
- **Inventory Value:** Total value of all stock across warehouses (quantity × average cost)
- **Active Projects:** Number of projects with status 'active'

Below the KPIs, you see three sections: Recent Sales (latest confirmed invoices), Recent Purchases (latest confirmed purchase invoices), and Inventory Snapshot (stock levels for tracked items).

Sidebar Navigation

The left sidebar contains navigation links organized into sections: Main (Dashboard, POS), Operations (Sales, Purchases, Inventory, Stock Takes, Manufacturing, Projects), Finance (Accounting, Payments, Reports, Currencies), HR (HR, Leave Requests), Master Data (Items, Partners), and Settings (Company Settings, Roles). The sidebar also includes a language toggle (EN/AR) and a theme toggle (Dark/Light) at the bottom.

2. Company Settings & Roles

Company Settings

Navigate to Settings > Company Settings. This page shows your current configuration and allows you to modify operational settings.

Setting	Description	Default
Enabled Modules	Which modules are active for your company	All 8 modules
Cost Method	Inventory costing method	Weighted Average
Max Users	Maximum number of users allowed	Plan-dependent
Low Stock Threshold	Default minimum stock level for alerts	0 (disabled)
Alert Emails	Comma-separated emails for low-stock alerts	None
Block Negative Stock	Prevent sales when stock reaches zero	Enabled

Roles & Permissions

Navigate to Settings > Roles. This page has two tabs: Roles and Users.

Creating a Custom Role:

1. Click the 'Roles' tab
2. Click 'Create Role'
3. Enter a role name (e.g., 'Sales Rep', 'Accountant', 'Warehouse Manager')
4. After creation, click 'Edit Permissions' on the role card
5. Check the permissions this role should have
6. Save — the role is now available for assignment

Practical Example — Creating an Accountant Role:

1. Create role named 'Accountant'
2. Grant these permissions:
 - ✓ accounting.view – View accounts and entries
 - ✓ accounting.manage – Create journal entries
 - ✓ accounting.reports – View financial reports
 - ✓ payments.view – View payment records
 - X sales.view – Not needed for accounting
 - X hr.view – Not needed for accounting
 - X items.manage – Not needed for accounting

Adding a User:

1. Click the 'Users' tab
2. Click 'Create User'
3. Enter: Full Name, Email, Password (min 8 characters)
4. Assign roles (comma-separated: 'Accountant, Sales Rep')

5. The user can now login with the permissions from all assigned roles combined

3. Master Data

3.1 Item Categories

Navigate to Items & Products > Categories tab. Categories help organize your products into logical groups for reporting and filtering.

To create a category:

1. Click 'Add Category'
2. Enter a name (e.g., 'Electronics', 'Office Supplies')
3. Enter a code (e.g., 'ELEC', 'OFFICE') — must be unique per company
4. Click 'Save Category'

3.2 Units of Measure

Navigate to Items & Products > Units tab. Units define how items are measured. Common units include: Piece (PCS), Kilogram (KG), Liter (LTR), Box (BOX), Meter (M).

To create a unit:

1. Click 'Add Unit'
2. Enter name, code, and symbol (e.g., 'Piece', 'PCS', 'pc')
3. Click 'Save Unit'

3.3 Unit Conversions

Navigate to Items & Products > Conversions tab. Unit conversions allow automatic conversion between different units. For example: 1 Box = 12 Pieces (factor = 12).

To create a conversion:

1. Click 'Add Conversion'
2. Select 'From Unit' (e.g., Box)
3. Select 'To Unit' (e.g., Piece)
4. Enter the factor (e.g., 12 — meaning 1 Box = 12 Pieces)
5. Click 'Save Conversion'

3.4 Items (Products & Services)

Navigate to Items & Products > Items tab. Items represent the products or services your company sells, buys, or uses.

Field	Required	Description	Example
Name	Yes	Item name	Wireless Mouse
Code	Auto	Unique identifier (auto-generated if blank)	WM-001
Barcode	No	UPC/EAN barcode for POS scanning	6901234567890
Type	Yes	Stock (physical), Service, or Manufactured	Stock

Field	Required	Description	Example
Category	No	Item category for organization	Electronics
Base Unit	No	Primary unit of measure	Piece
Sale Price	No	Default selling price	250.00
Purchase Price	No	Default buying price	150.00
Min Stock	No	Low-stock alert threshold	10

Item Types:

- **Stock:** Physical products tracked in inventory. Stock levels change on sales/purchases.
- **Service:** Non-physical items (consulting, delivery). No stock tracking.
- **Manufactured:** Products made from other items using Bills of Materials.

4. Partners (Customers & Suppliers)

Navigate to Partners. Partners represent the external entities your company does business with — customers who buy from you and suppliers who sell to you.

Field	Required	Description	Example
Name	Yes	Partner name	Mohamed Ahmed Trading
Code	Auto	Unique identifier	CUST-001
Type	Yes	Customer, Supplier, or Both	Customer
Phone	No	Contact phone	01012345678
Email	No	Contact email	info@ma-trading.com
Address	No	Physical address	Cairo, Egypt
Tax Number	No	Tax registration number	123-456-789
Opening Balance	No	Starting balance owed/owing	0.00
Credit Limit	No	Maximum credit allowed (EGP)	50,000

Partner Types:

- **Customer:** A company or individual who buys from you. Appears in Sales invoices.
- **Supplier:** A company or individual who sells to you. Appears in Purchase invoices.
- **Both:** An entity that is both a customer and supplier.

5. Currencies & Exchange Rates

Navigate to Currencies. The base currency is set when the company is created (default: EGP). You can add additional currencies and configure exchange rates for multi-currency transactions.

Adding a Currency:

1. Click 'Currencies' tab
2. Click 'Add Currency'
3. Enter code (e.g., 'USD') and name (e.g., 'US Dollar')
4. Click 'Save Currency'

Adding an Exchange Rate:

1. Click 'Exchange Rates' tab
2. Click 'Add Rate'
3. Select the currency (e.g., USD)
4. Enter `rate_to_base` (e.g., 50.00 means 1 USD = 50 EGP)
5. Set the `valid_from` date
6. Click 'Save Rate'

Note: When creating invoices in foreign currencies, the system uses the exchange rate to convert amounts to the base currency. The `fx_gain_loss` field on payments tracks any exchange rate differences.

6. Sales

Navigate to Sales. This module manages the complete sales lifecycle from invoice creation through confirmation and stock deduction.

Creating a Sales Invoice:

1. Click 'New Invoice'
2. Select a customer from the dropdown (or leave blank for walk-in)
3. The invoice number is auto-generated (e.g., SI-0001)
4. Set the date (defaults to today)
5. Optionally select a currency and exchange rate
6. Add line items:
 - a. Select an item from the dropdown
 - b. Enter the quantity
 - c. Enter the unit price
 - d. The line total is calculated automatically (qty × price)
7. Add more lines as needed
8. Click 'Create Invoice' — status is now 'Draft'
9. Review the invoice, then click 'Confirm' to finalize

What Happens on Confirmation:

When you click Confirm, the system performs the following actions atomically:

- Invoice status changes from 'Draft' to 'Confirmed'
- For each line item: the quantity is deducted from `warehouse_stock`
- For each line item: the `cost_price` is set from the current `average_cost`
- For each line item: an `inventory_movement` record is created (type: `sale_out`)
- The `total_amount` and `total_amount_base` are calculated using the FX rate
- If `block_negative_stock` is enabled, the system checks stock before deduction

Practical Example:

Sell 3 Wireless Mice to customer 'Mohamed Ahmed Trading' at 250 EGP each:

1. Click 'New Invoice'
2. Customer: Mohamed Ahmed Trading
3. Line 1: Wireless Mouse × 3 @ 250.00 EGP = 750.00 EGP
4. Total: 750.00 EGP
5. Click 'Create Invoice' → Invoice #SI-0001 created (Draft)
6. Click 'Confirm' → Stock reduced by 3, Invoice confirmed

7. Purchases

Navigate to Purchases. This module manages supplier invoices with automatic stock-in and weighted-average cost recalculation.

Creating a Purchase Invoice:

1. Click 'New Invoice'
2. Select a supplier from the dropdown
3. Add line items: select item, enter quantity and unit cost
4. Click 'Create Invoice' (status: Draft)
5. Click 'Confirm & Stock In' to finalize

What Happens on Confirmation:

Purchase confirmation triggers different logic than sales:

- Stock is ADDED to the warehouse (not deducted)
- Weighted-Average Cost (WAC) is recalculated:
$$\text{new_avg} = (\text{old_qty} \times \text{old_avg} + \text{new_qty} \times \text{unit_cost}) / (\text{old_qty} + \text{new_qty})$$
- This ensures the average cost reflects all purchases at their actual costs

Practical Example:

Buy 100 Wireless Mice from 'Nile Trading Co' at 150 EGP each:

1. Supplier: Nile Trading Co
2. Line 1: Wireless Mouse $\times$ 100 @ 150.00 EGP = 15,000.00 EGP
3. Total: 15,000.00 EGP
4. Click 'Create Invoice' → Invoice #PI-0001 created (Draft)
5. Click 'Confirm & Stock In' → Stock increased by 100
6. If previous avg cost was 160 and old qty was 50:
$$\text{new_avg} = (50 \times 160 + 100 \times 150) / (50 + 100) = 153.33 \text{ EGP}$$

8. Inventory & Warehouses

Stock Balance

Navigate to Inventory > Stock Balance tab. Shows current quantity, average cost, and total value for each item in each warehouse. This is your real-time inventory overview.

Warehouses

Navigate to Inventory > Warehouses tab. Create warehouses to organize stock locations. Examples: Main Warehouse, Branch Warehouse, Returns Warehouse, Damaged Goods.

To create a warehouse:

1. Click 'Add Warehouse'
2. Enter name and code
3. Click 'Save Warehouse'

Inventory Movements

Navigate to Inventory > Movements tab. This is a read-only log of all stock changes. Every sale, purchase, manufacturing, and stock take adjustment creates a movement record. Movement types include: purchase_in, sale_out, manufacturing_in, manufacturing_out, transfer, and adjustment.

9. Stock Takes (Physical Counting)

Navigate to Stock Takes. Stock takes reconcile your physical inventory count with the system's book quantities. This is essential for accuracy.

Creating a Stock Take:

1. Click '+ New Stock Take'
2. Select the warehouse to count
3. Optionally add a reference and note
4. Click 'Create Stock Take'
5. Add items to count:
 - Select an item
 - The book_qty (system quantity) is shown automatically
 - Enter the counted_qty (what you actually counted)
 - The diff_qty (difference) is calculated automatically
6. Add all items you want to count
7. Click 'Post' to apply the adjustments

What Post does: For each line where counted $\neq$ book, the system creates an inventory_movement of type 'adjustment' and updates warehouse_stock to match the physical count.

10. Accounting

Navigate to Accounting. The accounting module provides double-entry bookkeeping with a pre-seeded chart of accounts, journal entries, and three financial reports.

Chart of Accounts

The system comes with 13 pre-seeded accounts. You can add more. Account types include: Asset, Liability, Equity, Revenue, COGS (Cost of Goods Sold), Expense, Receivable, Payable, Inventory, Cash/Bank.

Code	Name	Type	Purpose
1000	Cash	Cash/Bank	Physical cash on hand
1100	Accounts Receivable	Receivable	Money owed by customers
1200	Inventory	Inventory	Value of stock on hand
1500	Fixed Assets	Asset	Long-term assets
2000	Accounts Payable	Payable	Money owed to suppliers
2100	Sales Tax Payable	Liability	Collected tax to remit
2200	Salaries Payable	Liability	Owed employee salaries
3000	Owner's Equity	Equity	Owner's investment
4000	Sales Revenue	Revenue	Income from sales
5000	COGS	COGS	Cost of items sold
6000	Operating Expenses	Expense	General business expenses
6100	FX Gain	Revenue	Foreign exchange gains
6200	FX Loss	Expense	Foreign exchange losses

Journal Entries

Navigate to Accounting > Journal Entries tab. Each entry has a date, reference, optional notes, and multiple lines (debits and credits). The system validates that total debits equal total credits before allowing you to post.

Practical Example — Recording Rent Payment:

1. Click '+ New Entry'
2. Date: 2026-08-01
3. Reference: RENT-AUG-2026
4. Add Line 1: Account = Operating Expenses, Debit = 5,000, Credit = 0
5. Add Line 2: Account = Cash, Debit = 0, Credit = 5,000
6. Balance check: Debit (5,000) = Credit (5,000) ✓
7. Click 'Post Entry'

Financial Reports

Navigate to Accounting and click the report tabs:

- **Trial Balance:** Lists all accounts with their debit and credit totals. Total debits must equal total credits.
- **Income Statement:** Revenue - COGS - Operating Expenses = Net Income. Shows profitability for a period.
- **Balance Sheet:** Assets = Liabilities + Equity. Shows financial position at a point in time.

11. Payments

Navigate to Payments. Record payments received from customers or made to suppliers.

Recording a Payment:

1. Click '+ New Payment'
2. Select the partner (customer or supplier)
3. Enter the amount in EGP
4. Select the payment method (Cash, Card, Bank Transfer, or Cheque)
5. Set the payment date
6. Optionally add notes
7. Click 'Save Payment'

Example: Customer 'Mohamed Ahmed' pays 5,000 EGP in cash:

Partner: Mohamed Ahmed Trading | Amount: 5,000 | Method: Cash | Date: Today

12. Human Resources

12.1 Departments

Navigate to HR > Departments tab. Create departments to organize employees. Common departments: Sales, Warehouse, Finance, IT, HR, Operations.

12.2 Employees

Navigate to HR > Employees tab.

To add an employee:

1. Click '+ Add Employee'
2. Fill in: Name, Employee Number (auto-generated), Position, Department, Basic Salary (EGP), Hire Date
3. Click 'Save Employee'

Example: Add 'Sara Mohamed' as Sales Representative:

Name: Sara Mohamed | Position: Sales Representative | Department: Sales

Basic Salary: 8,000 EGP | Hire Date: 2026-01-15

12.3 Attendance

Navigate to HR > Attendance tab. Record daily attendance for employees. Statuses: Present, Absent, Half Day, Leave. This data feeds into payroll calculation.

12.4 Payroll

Navigate to HR > Payroll tab.

1. Enter the payroll period (e.g., 2026-08)
2. Click 'Run Payroll'
3. System calculates for each active employee: Basic Salary - Deductions = Net Salary
4. Review the generated payroll lines
5. PayrollRun status changes to 'Confirmed'

12.5 Leave Requests

Navigate to Leave Requests.

To submit a request:

1. Click '+ New Request'
2. Select employee, leave type (Annual, Sick, Unpaid)
3. Set start and end dates
4. Enter reason
5. Submit — status is 'Pending'
6. Manager can Approve or Reject

13. Projects

Navigate to Projects. Track project profitability with cost allocation across materials, labor, and overhead.

Creating a Project:

1. Click '+ New Project'
2. Enter: Code (e.g., PRJ-001), Name, Client (partner), Contract Value (EGP)
3. Set start and end dates
4. Click 'Create Project'
5. Add cost lines throughout the project:
 - Material costs: raw materials, supplies
 - Labor costs: worker hours × hourly rate
 - Overhead costs: permits, transport, utilities
6. When complete: click 'Complete'
7. System calculates: $\text{Margin} = \text{Contract Value} - \text{Total Cost}$

Example: Office Renovation Project

Contract: 200,000 EGP | Materials: 80,000 | Labor: 60,000 | Overhead: 10,000

Total Cost: 150,000 EGP | Margin: 50,000 EGP (25%)

14. Manufacturing

14.1 Bills of Materials (BOM)

Navigate to Manufacturing > BOMs tab. A BOM defines how to make a product from raw materials.

To create a BOM:

1. Click '+ New BOM'
2. Name: 'Wireless Mouse Kit'
3. Output Item: Wireless Mouse
4. Output Quantity: 1
5. Add Components:
 - Mouse Body × 1
 - Circuit Board × 1
 - USB Cable × 1
6. Click 'Save BOM'

14.2 Work Orders

Navigate to Manufacturing > Work Orders tab.

1. Click '+ New Work Order'
2. Select BOM (optional) or product directly
3. Select warehouse for material consumption and output
4. Enter planned quantity
5. Click 'Create Work Order'
6. Add labor costs (description, hours, hourly rate)
7. Add overhead costs (description, amount)
8. Click 'Finish' — materials consumed from warehouse, finished goods added

15. Point of Sale (POS)

Navigate to POS. The POS module provides a session-based point of sale for retail operations with cash management.

Session Workflow:

1. Click 'Open Session' → Enter opening cash amount (e.g., 1,000 EGP)
2. Browse/search products in the left panel
3. Click a product to add to cart
4. Adjust quantities as needed
5. Click 'Pay' to complete the order
6. Repeat for more orders throughout the day
7. When done: Enter closing cash amount → Click 'Close Session'

System calculates:

- Expected Cash = Opening Cash + Total Sales
- Variance = Closing Cash - Expected Cash
- Positive variance = overage, Negative = shortage

16. Reports

Navigate to Reports. The system provides four built-in reports:

Report	Module	What It Shows
Sales Summary	Accounting	Total invoices, amounts by status, grand total
Stock Value	Inventory	Total inventory value, per-warehouse breakdown
Low Stock	Inventory	Items below minimum stock level (needs attention)
Project Costs	Projects	Cost breakdown per project with margin calculation
Trial Balance	Accounting	All account balances (debits vs credits)
Income Statement	Accounting	Revenue - COGS - Expenses = Net Income
Balance Sheet	Accounting	Assets = Liabilities + Equity

17. Tips & Best Practices

1. **Always confirm purchase invoices** — this updates stock levels and average costs. Unconfirmed purchases don't affect inventory.
2. **Set min_stock_level on items** — this enables automatic low-stock alerts via email. Configure alert emails in Company Settings.
3. **Use stock takes periodically** — reconcile physical vs book quantities monthly to catch discrepancies early.
4. **Create roles with minimal permissions** — follow the principle of least privilege. A cashier doesn't need accounting access.
5. **Back up your database regularly** — the automated backup script keeps 14 days. Test your restore procedure monthly.
6. **Use the Danger Zone sparingly** — clearing company data is irreversible. Always create a backup first.
7. **Enable only needed modules** — reduces UI complexity and prevents unauthorized access to unused features.
8. **Set up alert emails** — configure multiple recipients in Company Settings to stay informed about low stock levels.
9. **Use barcodes on items** — significantly speeds up POS operations and stock takes.
10. **Review Trial Balance monthly** — catch accounting errors early before they compound.
11. **Use weighted average costing** — it's the default and provides the most accurate cost tracking for most businesses.
12. **Document your chart of accounts** — add descriptions to accounts so new team members understand what each account is for.
